

MUTESTAND® FOR TENOR/BASS TROMBONE

THE THOUGHT BEHIND...

"As an active musician for many years I have seen the need for a functional mutestand that will make it easier for the musicians while performing"

Designer Svein Fylling

The uniquely tapered filter around each hole drastically prevent from noise when mutes are in use. This feature is extremely important since unnecessary noise is disturbing both for players and the audience while performing.

- Very easy and practical in use
- While performing at concerts, changing of mutes is done quickly, silently and discreetly
- When folded, the Mutestand® fits easily in instrument cases
- Timeless design
